

Swivl for Early Childhood Education

In-Home Observations

Multi-audio technology allows parents to participate providing more data for family engagement specialists while observing home environments.

Flipped Classroom

Build libraries of videos for students and parents to reference. Bookmark key moments during the lesson to guide viewers at home.

Early Childhood Research

Multi-camera videos and Speech Analysis give researchers unparalleled insights for individualized ECE observations.

Instructional Coaching

Provide time-stamped feedback using rubrics in Swivl cloud. Teachers and coaches can refer to evidence-based practices to engage in meaningful dialogue.

"Our project is building the skills and confidence of early childhood educators to promote social and emotional learning and the inclusion of all children. Swivl helps our educators in rural areas capture and share the practices they are using with children with their coach. We love the annotation feature to encourage reflective questioning and provide positive feedback. Swivl supports our team to work together collaboratively even when they are far apart!"

-Marilyn Armstrong, ASaP Project Manager, The GRIT Program
