USE CASES

Base Configuration

Two microphone solution for streaming to a computer – allows teacher and students be heard remotely. Best for simple classroom setup on a budget or without video requirements.

Transition Configuration

In addition to two microphone configuration, adds a static mobile device for a video feed to a remote body of participants. Serves as an ideal transition step until full configuration is available.

Full Configuration

Ideal configuration for larger classrooms and provides the best experience for a remote participant – teacher and students are heard and seen. For a combined video and presentation, audio is streamed through the computer.
